

1. Record Nr.	UNINA9910347048203321
Autore	Kühne Hildegard
Titolo	Analysis and recognition of human actions with flow features and temporal models
Pubbl/distr/stampa	KIT Scientific Publishing, 2014
ISBN	1000043583
Descrizione fisica	1 electronic resource (XV, 183 p. p.)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This work focuses the recognition of complex human activities in video data. A combination of new features and techniques from speech recognition is used to realize a recognition of action units and their combinations in video sequences. The presented approach shows how motion information gained from video data can be used to interpret the underlying structural information of actions and how higher level models allow an abstraction of different motion categories beyond simple classification.
