

1. Record Nr.	UNINA9910348214703321
Titolo	Running pure : the importance of forest protected areas to drinking water / / World Bank / WWF Alliance for Forest Conservation and Sustainable Use ; written and edited by Nigel Dudley and Sue Stolton
Pubbl/distr/stampa	Gland, Switzerland : , : World Wildlife Fund, , 2003
ISBN	2-88085-262-5
Descrizione fisica	1 online resource (112 pages)
Soggetti	Forest conservation Forest protection Water resources management Drinking water Water resources development Watershed management
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"A research report for the World Bank/WWF Alliance for Forest Conservation and Sustainable Use."
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	This report discusses the importance of forest protection on drinking water. Natural forests when managed well provide high quality drinking water to urban population with less sediment, pollutants and other catchments. Many cities in the world depend on protected areas for their drinking water supply including Melbourne in Victoria, Istanbul in Turkey, and Singapore. It is suggested that rural populations in watersheds should not be hampered during the protection of water quality.
