Sommario/riassunto

The investigation of sentential complementation focuses on properties of sentences that are embedded in other sentences. This book brings together a variety of studies on this topic in the framework of generative grammar. The first part of the book focuses on infinitival complements. The author provides new perspectives on raising and control, longstanding problems in infinitival complementation. He then examines the problem of clitic ordering in infinitives in Romance languages. The second part of the book addresses various aspects of Wh- sentences: extraction from negative and factive

Sommario/riassunto	In this volume the contributors use Geographical Information Systems (GIS) to reassess both historic and contemporary Asian countries and traditionally Islamic areas. This highly illustrated and comprehensive work highlights how GIS can be applied to the social sciences. With its

description of how to process, construct and manage geographical data
the book is ideal for the non-specialist looking for a new and
refreshing way to approach Islamic area studies.
