Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Turnpike Properties -- 2. Forest Management Problem -- 3. Turnpike Properties of Approximate Solutions -- 4. Generic Turnpike Results -- 5. The Structure of Approximate Solutions on Finite Intervals -- 6. Reconsidering the Forest Management Problem.
Sommario/riassunto	This book is devoted to the study of optimal control problems arising in forest management, an important and fascinating topic in mathematical economics studied by many researchers over the years. The volume studies the forest management problem by analyzing a class of optimal control problems that contains it and showing the existence of optimal solutions over infinite horizon. It also studies the structure of approximate solutions on finite intervals and their turnpike properties, as well as the stability of the turnpike phenomenon and the structure of approximate solutions on finite intervals in the regions close to the end points. The book is intended for mathematicians interested in the optimization theory, optimal control and their applications to the economic theory.

Sommario/riassunto	Winner of the 2010 Japan NPO Research Association Book AwardThe global discourse on civil society is both complicated and enriched in this participant study of Japan's volunteers, known as the third sector. In the wake of the Japanese government's failed response to the 1995 earthquake, volunteers took the lead in providing aid to victims. This recent sea change in Japanese society was quickly followed by the 1998 NPO Law (nonprofit organization law) that encourages third sector activities. Drawing on his fieldwork at one of the new NPOs, Akihiro Ogawa explores in detail the social and historical particularities of Japanese "civil society" or <i>shimin shakai</i> , revisiting how the concept is interpreted and practiced by the volunteers themselves. Civil society, Ogawa argues, can best be understood as an active, dynamic process

rather than as a static, abstract model.
