

1. Record Nr.	UNINA9910349363903321
Titolo	Aeromedical Evacuation : Management of Acute and Stabilized Patients // edited by William W. Hurd, William Beninati
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2019
ISBN	3-030-15903-5
Edizione	[2nd ed. 2019.]
Descrizione fisica	1 online resource (425 pages) : illustrations
Disciplina	616.025
Soggetti	Traumatology Critical care medicine Traumatic Surgery Intensive / Critical Care Medicine
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Aeromedical Evacuation: A Historical Perspective -- Military Casualty Evacuation: MEDEVAC -- Civilian Air Medical Transport -- Aircraft Considerations for Aeromedical Evacuation -- Preparation for Long-Distance Aeromedical Evacuation -- Aeromedical Patient Staging -- Military Aeromedical Evacuation Nursing -- Critical-Care Air Transport: Patient Flight Physiology and Organizational Considerations -- Aeromedical Evacuation of Patients with Abdominal, Genitourinary, and Soft Tissue Injuries -- Orthopedic Patients -- Aeromedical Evacuation of the Neurosurgical Patient -- Otorhinolaryngology Head and Neck Surgery Patients -- Care of Ophthalmic Casualties -- Peripheral Vascular Casualties -- Aeromedical Evacuation of Cardiothoracic Casualties -- Burn Casualties -- Patients Requiring Mechanical Ventilation -- Medical Casualties -- Aeromedical Evacuation of Patients with Contagious Infections -- Aeromedical Evacuation of Obstetric and Gynecological Patients -- Overview of Pediatric and Neonatal Transport -- Aeromedical Evacuation of Psychiatric Casualties.
Sommario/riassunto	Now in its fully revised and expanded second edition, this volume is the definitive resource on long-distance air transport of injured patients in both peacetime and wartime. It discusses the history of aeromedical

evacuation, triage and staging of the injured patient, evacuation from site of injury to medical facility, air-frame capabilities, medical capabilities in-flight, response to in-flight emergencies, and mass emergency evacuation. Specific medical conditions are addressed in detail in the second half of the book, including general surgical casualties such as abdominal wounds and soft tissue injuries, vascular injuries, maxillofacial injuries, head and spinal cord injuries, ophthalmologic casualties, orthopedic casualties, burns, pediatric casualties, obstetric-gynecologic casualties, and more. For each medical condition, important topics are addressed such as conditions needed to be met before transportation, special concerns, supplies and needs of the specific patients and possible in-flight emergencies and their appropriated treatment. Containing several new chapters and featuring extensively updated contributions from experts in the field, *Aeromedical Evacuation: Management of the Acute and Stabilized Patient, Second Edition* is a must-have reference for a whole new generation of military flight surgeons and flight nurses responsible for aeromedical evacuation of casualties as well as civilian physicians and nurses involved in air transport of ill and post-operative patients. .
