Soggetti	Philosophy Operations research Decision making Personality Social psychology Philosophy, general Operations Research/Decision Theory Personality and Social Psychology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This Handbook presents the state of the art overview of current research on anticipation studies. It develops anticipation from both the theoretical and applied points of view. Via this comprehensive overview of the research on anticipation, this Handbook makes clear that anticipation is a serious topic of research that can and should be connected to Futures Studies research, perspectives and orientation. The Handbook uses the anticipatory viewpoint as a unifying framework able both to stop the progressive fragmentation of the human and social sciences and begin a process aimed at progressively closer integration, mutual knowledge and dialogue among the human and social sciences. It sets the agenda for the field, helps futures studies to come of age, and contributes to changing the orientation of the human and social sciences from their dominant past-orientation to a new

future-orientation. The Handbook presents research from a variety of fields such as: Biology, ecology, psychology, social sciences, humanities, engineering, and computer science. The editorial board consists of scholars from various sciences, such as futurists, sociologists, economists, statisticians, computer scientists, designers and game builders.
