Sommario/riassunto

Aristotle's neat compartmentalization notwithstanding (*Poetics*, ch. 9), historians and playwrights have both been laying claim to representations of the past - arguably since Antiquity, but certainly since the Renaissance. At a time when narratology challenges historiographers to differentiate their "emplotments" (White) from literary inventions, this thirteen-essay collection takes a fresh look at the production of historico-political knowledge in literature and the intricacies of reality and fiction. Written by experts who teach in Germany, Austria, Russia, and the United States, the articles provide a thorough interpretation of early modern drama (with a view to classical times and the 19th century) as an ideological platform that is as open to royal self-fashioning and soteriology as it is to travestying and subverting the means and ends of historical interpretation. The comparative analysis of metapoetic and historiosophic aspects also sheds light on drama as a transnational phenomenon, demonstrating the importance of the cultural net that links the multifaceted textual examples from France, Russia, England, Italy, and the Netherlands.

Soggetti	Diabetes
	Endocrinology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia

## Nota di contenuto

Overview of glucose homeostasis -- Insulin signaling and biological effects -- Diagnostic criteria and classification -- Epidemiology and risk factors of type 1 diabetes -- Epidemiology and risk factors of type 2 diabetes -- Genetics -- Pathogenesis of type 1 diabetes -- Pathogenesis of type 2 diabetes -- Monogenic diabetes -- Methods to assess in vivo insulin secretion and insulin sensitivity -- Diabetes screening and prediabetes -- Metabolic follow-up and home blood glucose monitoring -- Glycemic targets and prevention of chronic complications -- Prevention of type 1 diabetes -- Prevention of type 2 diabetes -- Patient education and empowerment -- Prevention of type 1 diabetes -- Prevention of type 2 diabetes -- Patient education and empowerment -- Treatment of diabetes with life style changes -- Treatment with oral drugs -- Treatment with GLP-1 receptor agonists -- Insulin treatment -- Insulin pumps -- Islet cell or pancreas transplantation -- Metabolic surgery.

## Sommario/riassunto

This book provides the reader with comprehensive information on the epidemiology, etiology, pathogenesis, pathophysiology, clinical features, prevention, and treatment of diabetes with the aim of empowering health care providers in their daily battle against the disease. Diabetes has been identified by WHO and the United Nations as a medical emergency because of the increase in its global prevalence, which may reach one billion in three to four decades if the trend remains unchanged. Despite improved care that is helping to prolong life, diabetes impacts substantially on the quality of life of those affected and kills or disables several million people each year. The disease is systemic because all organs, tissues, and cells suffer in the presence of hyperglycemia and are damaged by the diabetic milieu. Unfortunately, most patients with diabetes will consequently experience chronic diabetic complications. This book, combining basic science with a practical clinical orientation, will be of value for all physicians and nurses who care for patients with diabetes.
