

1. Record Nr.	UNINA9910349474203321
Autore	Mathai A. M
Titolo	Erdélyi–Kober Fractional Calculus : From a Statistical Perspective, Inspired by Solar Neutrino Physics / / by A. M. Mathai, H. J. Haubold
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2018
ISBN	981-13-1159-5 9789811311598
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (XII, 122 p. 6 illus., 3 illus. in color.)
Collana	SpringerBriefs in Mathematical Physics, , 2197-1765 ; ; 31
Disciplina	530.15
Soggetti	Mathematical physics Special functions Functional analysis Mathematical Physics Special Functions Functional Analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This book focuses on Erdélyi–Kober fractional calculus from a statistical perspective inspired by solar neutrino physics. Results of diffusion entropy analysis and standard deviation analysis of data from the Super-Kamiokande solar neutrino experiment lead to the development of anomalous diffusion and reaction in terms of fractional calculus. The new statistical perspective of Erdélyi–Kober fractional operators outlined in this book will have fundamental applications in the theory of anomalous reaction and diffusion processes dealt with in physics. A major mathematical objective of this book is specifically to examine a new denition for fractional integrals in terms of the distributions of products and ratios of statistically independently distributed positive scalar random variables or in terms of Mellin convolutions of products and ratios in the case of real scalar variables. The idea will be generalized to cover multivariable cases as well as matrix variable cases. In the matrix variable case, M-convolutions of products and ratios will be used to extend the ideas. We then give a denition for the

case of real-valued scalar functions of several matrices.
