Sommario/riassunto

What does it mean to be an Indigenous man today? Between October 2010 and May 2013, Sam McKegney conducted interviews with leading Indigenous artists, critics, activists, and elders on the subject of Indigenous manhood. In offices, kitchens, and coffee shops, and once in a car driving down the 401, McKegney and his participants tackled crucial questions about masculine self-worth and how to foster balanced and empowered gender relations. *Masculindians* captures twenty of these conversations in a volume that is intensely personal, yet speaks across generations, geography, and gender boundaries. As varied as their speakers, the discussions range from culture, history, and world view to gender theory, artistic representations, and activist interventions. They speak of possibility and strength, of beauty and vulnerability. They speak of sensuality, eroticism, and warriorhood, and of the corrosive influence of shame, racism, and violence. Firmly grounding Indigenous continuance in sacred landscapes, interpersonal reciprocity, and relations with other-than-human kin, these conversations honour and embolden the generative potential of healthy Indigenous masculinities.

Nota di contenuto	Intro -- Table des matières -- Into the woods -- Towards an interdisciplinary approach on ancient forests -- Part 1: Perception and management of ancient forests as a natural and cultural heritage -- Part 2: Investigating forest ancientness: advocating for interdisciplinarity -- Part 3: "At the edge of the forest": other ways to think about ancient and old-growth forests -- Conclusions - Reflections on interdisciplinarity in the social and natural sciences from the perspective of disciplinary frontiers in the face of a complex reality -- List of authors.
Sommario/riassunto	At the centre of concerns related to curbing the decline in forest biodiversity caused by increasing anthropogenic pressure and global change, old-growth forests are mainly characterised by the continuity of their tree cover. This has been defined mainly by their appearance on historical maps and by ecological criteria dating back to certain temporal cut-off points (about two centuries). Inherited over hundreds, even thousands, of years of interaction between Man and Nature, these ancient forests have been managed and shaped by past societies to meet their various needs, both domestic and industrial. Also, studying the historical trajectories of such forests, their responses to

environmental and anthropogenic stress, and the long-term consequences of past human activities, is essential in order to better understand their current ecology and rethink their conservation. The development of pluridisciplinary and interdisciplinary research (ecology, paleoecology, history, archaeology, geography, sociology) now makes it possible not only to push back the hitherto accepted thresholds of ancientness, but in particular to understand old forests in their entirety and complexity over the longer term. This book, comprising both theoretical and methodological contributions along with case studies, reflects the diversity of current approaches and thinking and promotes interdisciplinarity as the only route to a comprehensive understanding of ancient forests as natural and cultural assets.
