

1. Record Nr.	UNINA9910350220703321
Titolo	Advances in Spectroscopy: Molecules to Materials : Proceedings of NCASMM 2018 // edited by Dheeraj Kumar Singh, Sourav Das, Arnulf Materny
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2019
ISBN	981-15-0202-1
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (449 pages)
Collana	Springer Proceedings in Physics, , 1867-4941 ; ; 236
Disciplina	535.84
Soggetti	Spectrum analysis Mechanics, Applied Solids Mechatronics Spectroscopy Solid Mechanics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Excited State Dynamic of Fluorogenic Molecules -- Sum Frequency Generation Vibrational Spectroscopy: A Nonlinear Optical Tool to Probe the Polymer Interfaces -- Towards Fluorogenic and Chromogenic Sensing of Heavy Metal Ions in Aqueous Medium: A Mini-Review -- Quantum Cascade Laser Spectroscopy for Atmospheric Sensing and Biomedical Diagnostics -- Optical Signal Enhancement in LIBS Using Aluminum Nanoparticles on Brass Sample -- Spectroscopic Characterization of Metal-Polymer Interface for Electronic Applications -- Graphene, Its Analogues and Modern Science -- Study of Limonene Loaded Zein Nanoparticles for Sustainable Agriculture -- Effect of Magnetic Ordering on Phonon Raman Spectra in Magnetic Systems -- Strain Induced Changes in Vibrational Properties of Arsenene and Antimonene Monolayer -- Trapping Melamine with Pristine and Functionalized Graphene Quantum Dots: DFT and SERS Studies.
Sommario/riassunto	This book presents and discusses recent developments in the broad field of spectroscopy, providing the reader with an updated overview. The main objective is to introduce them to recent innovations and

current trends in spectroscopy applied to molecules and materials. The book also brings together experimentalists and theoreticians to highlight the multidimensional aspects of spectroscopy and discuss the latest issues. Accordingly, it provides insights not only into the general goals of spectroscopy, but also into how the various spectroscopic techniques represent a toolbox that can be used to gain a more detailed understanding of molecular systems and complex chemical problems. Besides technical aspects, basic theoretical interpretations of spectroscopic results are also presented. The spectroscopy techniques discussed include UV-visible absorption spectroscopy, Raman spectroscopy, IR absorption spectroscopy, fluorescence spectroscopy, and time-resolved spectroscopy. In turn, basic tools like lasers and theoretical modeling approaches are also presented. Lastly, applications for the characterization of fundamental properties of molecules (environmental aspects, biomolecules, pharmaceutical drugs, hazardous molecules, etc.) and materials (nanomaterials, nuclear chemistry materials, biomaterials, etc.) are discussed. Given its scope, the book offers a valuable resource for researchers from various branches of science, and presents new techniques that can be applied to their specific problems. .
