

1. Record Nr.	UNINA9910350221003321
Titolo	The Art of High Performance Computing for Computational Science, Vol. 2 [[electronic resource]] : Advanced Techniques and Examples for Materials Science / / edited by Masaaki Geshi
Pubbl/distr/stampa	Singapore : , : Springer Singapore : , : Imprint : Springer, , 2019
ISBN	981-13-9802-X
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (IX, 206 p. 99 illus., 7 illus. in color.)
Disciplina	005.11
Soggetti	Computer programming Chemoinformatics Computer simulation Programming Techniques Computer Applications in Chemistry Simulation and Modeling
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Chapter 1: Supercomputers and application performance -- Chapter 2: Performance optimization of applications -- Chapter 3: Case studies of performance optimization of applications -- Chapter 4: O(N) methods -- Chapter 5: Acceleration of Classical Molecular Dynamics Simulations -- Chapter 6: Large scale quantum chemical calculation.
Sommario/riassunto	This book presents advanced and practical techniques for performance optimization for highly parallel processing. Featuring various parallelization techniques in material science, it is a valuable resource for anyone developing software codes for computational sciences such as physics, chemistry, biology, earth sciences, space science, weather, disaster prevention and manufacturing, as well as for anyone using those software codes. Chapter 1 outlines supercomputers and includes a brief explanation of the history of hardware. Chapter 2 presents procedures for performance evaluation, while Chapter 3 describes the set of tuned applications in materials science, nanoscience and nanotechnology, earth science and engineering on the K computer. Introducing the order-N method, based on density functional theory

(DFT) calculation, Chapter 4 explains how to extend the applicability of DFT to large-scale systems by reducing the computational complexity. Chapter 5 discusses acceleration and parallelization in classical molecular dynamics simulations, and lastly, Chapter 6 explains techniques for large-scale quantum chemical calculations, including the order-N method. This is the second of the two volumes that grew out of a series of lectures in the K computer project in Japan. The first volume addresses more basic techniques, and this second volume focuses on advanced and concrete techniques.
