

1. Record Nr.	UNINA9910350290803321
Autore	McKinley Arnold
Titolo	The Analytical Foundations of Loop Antennas and Nano-Scaled Rings / / by Arnold McKinley
Pubbl/distr/stampa	Singapore : , : Springer Singapore : , : Imprint : Springer, , 2019
ISBN	981-13-5893-1
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (XXII, 203 p. 78 illus., 70 illus. in color.)
Collana	Signals and Communication Technology, , 1860-4862
Disciplina	621.3
Soggetti	Microwaves Optical engineering Optical materials Electronic materials Nanotechnology Applied mathematics Engineering mathematics Microwaves, RF and Optical Engineering Optical and Electronic Materials Nanotechnology and Microengineering Mathematical and Computational Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Wave-Matter Interactions -- Perfectly Conducting Closed Loops -- Lossy Metal Closed Loops and Nano-Rings -- Split- Ring Resonators -- Multiple-Gap Ring Resonators -- Non-Toroidal Nano-rings -- Arrays of Nano-rings -- Fabrication of Nano-rings -- Applications -- Computations.
Sommario/riassunto	This book develops the analytical theory of perfectly conducting and lossy metal, circular, round-wire loop antennas and nano-scaled rings from the radio frequency (RF) regime through infrared and the optical region. It does so from an antenna theory perspective. It is the first time that all of the historical material found in the literature has appeared in one place. It includes, particularly, material that has appeared in the literature only in the last decade and some new

material that has not yet been published. The book derives the input impedance, resonances and anti-resonances, the RLC circuit model representation, and radiation patterns not only of closed loops and rings, but also of loops and rings loaded randomly and multiply with resistive and reactive impedances. Every derivation is compared with simulations run in Microwave Studio (MWS). It looks carefully at the physical response of loop antennas and nano-rings coupled to a source at one point in the periphery and at such rings illuminated by a plane wave arriving from every different direction with the E-field in all polarizations. The book ends with a brief look at polygonal loops, two dimensional arrays of nano-rings, and Yagi-Uda arrays. .
