

1. Record Nr.	UNINA9910350318503321
Autore	Singh Madhusudan
Titolo	Node-to-Node Approaching in Wireless Mesh Connectivity [[electronic resource] /] / by Madhusudan Singh
Pubbl/distr/stampa	Singapore : , : Springer Singapore : , : Imprint : Springer, , 2019
ISBN	981-13-0674-5
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (XIX, 63 p. 44 illus., 18 illus. in color.)
Collana	SpringerBriefs in Applied Sciences and Technology, , 2191-530X
Disciplina	621.382
Soggetti	Telecommunication Wireless communication systems Mobile communication systems Communications Engineering, Networks Information Systems Applications (incl. Internet) Wireless and Mobile Communication
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Wireless Networks: Overview -- Routing Protocols for Wireless Network -- Novel Cluster Based Routing Protocol (NCBRP) -- Decentralized Hybrid Routing Mechanism for WMNs -- Wireless Mesh Network: Real Time Test-bed -- Future of Wireless Mesh Networks.
Sommario/riassunto	This book highlights routing protocols for wireless mesh networks (WMNs; IEEE 802.11s). It provides an overview of the wireless networks (history, MANET, family of IEEE 802.11, WMNS, etc.) and routing protocols, such as AODV, DSR, OLSR, etc, and also highlights two resolutions of routing protocols with respect to end-to-end delay, packet delivery ratio and routing overhead in WMNs. Wireless mesh networks have become a hot topic for researcher into the deployment of wireless networks, and they represents the connectivity of mesh networking in IEEE 802.11 amendment in static and ad-hoc networks. Moreover, WMNs have numerous attractive features, such as highly reliable connectivity, easy deployment, self-healing, self-configuring, and flexible network expansion. The book describes two routing mechanisms: novel cluster-based routing protocols (NCBRP), and decentralized hybrid wireless mesh protocol (DHWMP).
