Sommario/riassunto

This book provides a broad overview of the current research on various aspects of development, with a focus on India. The content and treatment of the subject of development in this volume is distinctive in many ways. It is a balanced mix of theory and practical elements, dealing with a number of issues at micro as well as macro levels. The analyses of the current socio-economic problems are attempted in an elegant yet simple manner which makes it equally useful for an aspiring researcher in economics or any inter disciplinary field. The methodologies of the articles include analytical verbal argumentative logic, theoretical constructs or different versions of statistical, econometric or programming techniques. It also contains well written survey articles, which are useful in grasping the fundamental research issues and in tracing the progress of research in an area. The general scope of the book is very wide as the readership can include researchers, scholars, graduate and undergraduate students, policy makers and practitioners. Though the contributors are primarily scholars in the field of Economics or Statistics, the book contains useful takeaways for those working in the area of Development. It will also be of interest to policy makers and practitioners interested in development issues, and to post graduate students in Economics or any field, in social science, management or development.
