

1. Record Nr.	UNINA9910350336003321
Titolo	Enzymatic Polymerization towards Green Polymer Chemistry // edited by Shiro Kobayashi, Hiroshi Uyama, Jun-ichi Kadokawa
Pubbl/distr/stampa	Singapore : , : Springer Singapore : , : Imprint : Springer, , 2019
ISBN	981-13-3813-2
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (X, 389 p. 224 illus., 56 illus. in color.)
Collana	Green Chemistry and Sustainable Technology, , 2196-6982
Disciplina	541.2254
Soggetti	Polymers Green chemistry Catalysis Structural materials Polymer Sciences Green Chemistry Structural Materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction: Enzymatic Polymerization -- Synthesis of Polysaccharides I: Hydrolase as Catalyst -- Synthesis of Polysaccharides II: Phosphorylase as Catalyst -- Synthesis of Polysaccharides III: Sucrase as Catalyst -- Synthesis of Polyesters I: Hydrolase as Catalyst for Polycondensation -- Synthesis of Polyesters II: Hydrolase as Catalyst for Ring-Opening Polymerization -- Synthesis of Polyesters III: Acyltransferase as Catalyst -- Synthesis of Polypeptides -- Synthesis of Poly(aromatic)s I: Oxidoreductase as Catalyst -- Synthesis of Poly(aromatic)s II: Enzyme-Model Complex as Catalyst -- Synthesis of Vinyl Polymers via Enzymatic Oxidative Polymerization -- Enzymatic-Modification of Polymers and -Synthesis of Functionalized Polymers.
Sommario/riassunto	This book comprehensively covers researches on enzymatic polymerization and related enzymatic approaches to produce well-defined polymers, which is valuable and promising for conducting green polymer chemistry. It consists of twelve chapters, including the following topics: The three classes of enzymes, oxidoreductases, transferases and hydrolases, have been employed as catalysts for

enzymatic polymerization and modification; Well-defined polysaccharides are produced by enzymatic polymerization catalyzed by hydrolases and transferases; Hydrolase-catalyzed polycondensation and ring-opening polymerization are disclosed to produce a variety of polyesters; Polyesters are synthesized by in-vivo acyltransferase catalysis produced by microorganisms; Enzymatic polymerization catalyzed by appropriate enzymes also produces polypeptides and other polymers; Poly(aromatic)s are obtained by enzymatic polymerization catalyzed by oxidoreductases and their model complexes; Such enzymes also induce oxidative polymerization of vinyl monomers; Enzymatic modification of polymers is achieved to produce functionalized polymeric materials; The enzymatic polymerization is a green process with non-toxic catalysts, high catalyst efficiency, green solvents and renewable starting materials, and minimal by-products; Moreover, renewable resources like biomass are potentially employed as a starting substrate, producing useful polymeric materials. This book is not only educative to young polymer chemists like graduate students but also suggestive to industrial researchers, showing the importance of the future direction of polymer synthesis for maintaining a sustainable society.
