Sommario/riassunto

The book provides a detailed overview and analysis of important EU Internet regulatory challenges currently found in various key fields of law directly linked to the Internet such as information technology, consumer protection, personal data, e-commerce and copyright law. In addition, it aims to shed light on the content and importance of various pending legislative proposals in these fields, and of the Court of Justice of the European Union's recent case law in connection with solving the different problems encountered. The book focuses on challenging legal questions that have not been sufficiently analyzed, while also presenting original thinking in connection with the regulation of emerging legal questions. As such, it offers an excellent reference tool for researchers, policymakers, judges, practitioners and law students with a special interest in EU Internet law and regulation.
