

1. Record Nr.	UNINA9910366583403321
Autore	Zhang Hongliang
Titolo	Unmanned Aerial Vehicle Applications over Cellular Networks for 5G and Beyond [[electronic resource] /] / by Hongliang Zhang, Lingyang Song, Zhu Han
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020
ISBN	3-030-33039-7
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (231 pages)
Collana	Wireless Networks, , 2366-1186
Disciplina	621.38456
Soggetti	Wireless communication systems Mobile communication systems Electrical engineering Computer organization Wireless and Mobile Communication Communications Engineering, Networks Computer Systems Organization and Communication Networks
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	1 Overview of 5G and Beyond Communications -- 2 Basic Theoretical Background -- 3 UAV Assisted Cellular Communications -- 4 Cellular Assisted UAV Sensing. .
Sommario/riassunto	This book discusses how to plan the time-variant placements of the UAVs served as base station (BS)/relay, which is very challenging due to the complicated 3D propagation environments, as well as many other practical constraints such as power and flying speed. Spectrum sharing with existing cellular networks is also investigated in this book. The emerging unmanned aerial vehicles (UAVs) have been playing an increasing role in the military, public, and civil applications. To seamlessly integrate UAVs into future cellular networks, this book will cover two main scenarios of UAV applications as follows. The first type of applications can be referred to as UAV Assisted Cellular Communications. Second type of application is to exploit UAVs for sensing purposes, such as smart agriculture, security monitoring, and

traffic surveillance. Due to the limited computation capability of UAVs, the real-time sensory data needs to be transmitted to the BS for real-time data processing. The cellular networks are necessarily committed to support the data transmission for UAVs, which the authors refer to as Cellular assisted UAV Sensing. To support real-time sensing streaming, the authors design joint sensing and communication protocols, develop novel beamforming and estimation algorithms, and study efficient distributed resource optimization methods. This book targets signal processing engineers, computer and information scientists, applied mathematicians and statisticians, as well as systems engineers to carve out the role that analytical and experimental engineering has to play in UAV research and development. Undergraduate students, industry managers, government research agency workers and general readers interested in the fields of communications and networks will also want to read this book.
