1. Record Nr. UNINA9910367564103321 Autore Lee Saro Titolo Machine Learning Techniques Applied to Geoscience Information System and Remote Sensing MDPI - Multidisciplinary Digital Publishing Institute, 2019 Pubbl/distr/stampa **ISBN** 3-03921-216-8 Descrizione fisica 1 electronic resource (438 p.) Inglese Lingua di pubblicazione **Formato** Materiale a stampa Livello bibliografico Monografia As computer and space technologies have been developed, geoscience Sommario/riassunto information systems (GIS) and remote sensing (RS) technologies, which deal with the geospatial information, have been rapidly maturing. Moreover, over the last few decades, machine learning techniques including artificial neural network (ANN), deep learning, decision tree, and support vector machine (SVM) have been successfully applied to geospatial science and engineering research fields. The machine learning techniques have been widely applied to GIS and RS research fields and have recently produced valuable results in the areas of geoscience, environment, natural hazards, and natural resources. This book is a collection representing novel contributions detailing machine learning techniques as applied to geoscience information systems and

remote sensing.
