1. Record Nr. UNINA9910367748303321 Autore Alonso-Vante Nicolas Titolo Novel Non-Precious Metal Electrocatalysts for Oxygen Electrode Reactions MDPI - Multidisciplinary Digital Publishing Institute, 2019 Pubbl/distr/stampa **ISBN** 3-03921-541-8 Descrizione fisica 1 electronic resource (190 p.) Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia Research on alternative energy harvesting technologies, conversion and Sommario/riassunto storage systems with high efficiency, cost-effective and environmentally friendly systems, such as fuel cells, rechargeable metal-air batteries, unitized regenerative cells, and water electrolyzers has been stimulated by the global demand on energy. The conversion between oxygen and water plays a key step in the development of oxygen electrodes: oxygen reduction reaction (ORR) and oxygen evolution reaction (OER), processes activated mostly by precious metals, like platinum. Their scarcity, their prohibitive cost, and declining activity greatly hamper large-scale applications. This issue reports on novel non-precious metal electrocatalysts based on the innovative design in chemical compositions, structure, and

morphology, and supports for the oxygen reaction.
