| Nota di contenuto       | 1. Involuntary Weight Loss -- 2. Assessing Decision-Making Capacity -- 3. Acute Illness at Home -- 4. Dementia Behavior Management -- 5. Bacteriuria in a Patient with Incident Delirium -- 6. Caregiver Burden -- 7. Elder Abuse and Neglect -- 8. Management of Frequent Falls -- 9. Home Assessments: Improving Patients' Capacity for Self-Management -- 10. Transitioning to Long-Term Care -- 11. Pressure Injuries -- 12. Opioid Management -- 13. Social Isolation -- 14. Serious Mental Illness -- 15. Functional Rehabilitation and Realistic Goals -- 16. Polypharmacy -- 17. Telephone Medicine -- 18. Morbid Obesity -- 19. Urinary Catheter Management at Home -- 20. End of Life Care. |
| Sommario/riassunto      | This book aims to equip individual clinicians with the interdisciplinary knowledge, skills, and perspective they need to provide the best care possible. Written by experts in home-based medical care, this book consists of 20 of the most common scenarios that challenge physicians administering home-based care for geriatric patients. Each scenario requires an approach or leverages aspects of care delivery that most  |

are not trained in. Additionally, each scenario reflects an approach to care that is enhanced by interdisciplinary input. Finally, each case lends itself to a practical problem-solving approach that could be accomplished by most home-based medical care providers, even in the absence of an interdisciplinary team. Home-Based Medical Care for Older Adults is a valuable resource for all clinicians who may administer medical care in a non-medical setting, including geriatricians, family medicine physicians, psychiatrists, home nurses, social workers, students, and other interdisciplinary team members. .
