   Collana   Scuola delle Scienze Umane e Sociali. Quaderni

   Soggetti   Political Science
                    Political science

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Sommario/riassunto   The volume collects the contributions presented at the sixth Gretl
                    Conference - which took place at the Department of Political Science,
                    University of Naples Federico II, on June 13-14, 2019. Gretl (Gnu
                    Regression, Econometrics and Time-series Library) is a free, open-
                    source software for statistical-econometric analysis, written in C and
                    available on different platforms. Born as a versatile teaching tool, in its
                    10 years of life it has grown enormously also as a research tool. The
                    Conference saw the presentation of both theoretical and applied
                    studies in order to share the latest software developments and new
                    features. The volume includes 15 contributions by scholars on various
                    topics, including Generalized Dynamic Factor Models, Propensity Score
                    Matching, Space Models and Models for Ordinary Data, Cointegration
                    and Boostrap techniques, which were accepted after an anonymous
                    review process.
