The Pursuit of a Common External Energy Policy and the Domestic Politics of EU Member States Preferences -- The Functionality and Dysfunctionality of Global Trade Governance – the European Union Perspective.

Sommario/riassunto

In light of new global challenges for international cooperation and coordination, such as the revival of protectionism, surge of populism, or energy-related issues, this volume highlights possible scenarios for the future of Global Economic Governance (GEG). The contributing authors analyze the substance of GEG as a normative framework for resolving collective action issues and promoting cross-border coordination and co-operation in the provision or exchange of goods, money, services and technical expertise in the world economy. Furthermore, the book examines drivers of fundamental shifts in global economic steering and covers topics such as power and authority shifts in the global governance architecture, technological and energy-related challenges, and the role of the G20 and BRICS in shaping global economic governance. “This book provides a very timely and nuanced account of the challenges facing the established global order.” Andrew F. Cooper (Professor of Political Science at the University of Waterloo) “This valuable collection from a new generation of innovative scholars of global economic governance offers insights from a broad range of theoretical approaches to the central policy issues of the day” John Kirton (Director of the Global Governance Program, Munk School of Global Affairs, University of Toronto).
