

1. Record Nr.	UNINA9910373895503321
Autore	Rega Carlo
Titolo	Ecological Rationality in Spatial Planning : Concepts and Tools for Sustainable Land-Use Decisions // by Carlo Rega
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020
ISBN	3-030-33027-3
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (XV, 198 p. 11 illus., 8 illus. in color.)
Collana	Cities and Nature, , 2520-8306
Disciplina	333.7313
Soggetti	Regional planning Urban planning Regional economics Spatial economics Sustainable development Ecology Landscape/Regional and Urban Planning Regional/Spatial Science Sustainable Development Ecology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Chapter 1. Standing on the shoulders of giants – reviving ecological approaches in planning traditions -- Chapter 2. The concept of Ecological Rationality and its application to spatial planning -- Chapter 3. Bridging the gaps: connecting Spatial Planning with Land Use Science and Political Ecology -- Chapter 4. Towards a conceptual framework for ecological rationality in spatial planning -- Chapter 5. A closer look to processes of territorial transformations in Europe: urbanisation, agricultural intensification and land abandonment -- Chapter 6. Policies and regulatory frames in the EU and the needed link with spatial planning -- Chapter 7. Conclusions and ways forward: five propositions for bringing back ecological rationality in spatial planning.
Sommario/riassunto	Spatial planning defines how men use one of the most important and scarce resources on Earth: land. Planners therefore play a key role in

countering or deepening the current ecological crisis. To foster ecological transitions, planning scholars and practitioners need to be equipped with sound theories and practical tools. To this end, this book advocates a re-foundation of spatial planning under the paradigm of “ecological rationality”, based on the reevaluation of early pioneers of ecological planning and mutual fertilization with different disciplines, including decision-making science, ecology, (eco)system theory, land use science and political ecology. The key principles of ecological rationality and its application to spatial planning are discussed and this conceptual framework is used to explain the main underlying drivers of ecological degradation and their spatial manifestations at the local level. Current policy instruments in the European context, which can be used to underpin ecological planning, such as Green Infrastructure and the Mapping and Assessment of Ecosystem Service (MAES) initiative, are also examined.
