   Livello bibliografico Monografia

   Sommario/riassunto The 2017 Workshop on ns-3 (WNS3 2017) is the ninth edition of an
                       annual series of workshops around the discrete-event network
                       simulator known as "ns-3". The workshop aims to gather ns-3 users
                       and developers, together with networking simulation practitioners and
                       users, and developers of other network simulation tools, to discuss the
                       ns-3 simulator and related activities. ns-3 is a tool used for
                       performance evaluation in computer networks, and this workshop
                       offers a venue for those involved with extending or testing the tool
                       itself to publish original work in this regard. The workshop is
                       sponsored by the ns-3 Consortium and organized in conjunction with
                       training sessions, the Consortium Annual Meeting, and developer
                       discussions.
