1. Record Nr.   UNINA9910375965203321

   Autore   Szefer Jakub

   Titolo   Proceedings of the 7th International Workshop on Hardware and
                        Architectural Support for Security and Privacy / / Jakub Szefer

   Pubbl/distr/stampa   New York, NY, USA : , : ACM, , 2018

   Descrizione fisica   1 online resource (84 pages)

   Collana   ACM Other conferences

   Disciplina   005.8

   Soggetti   Computer security

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Sommario/riassunto   With recent, publicized security flaws in major computer processors,
                        security and privacy research focusing on hardware and architecture
                        has gained even more interest in the past year. In the era of cloud
                        computing, smartphones and Internet of Things (IoT), industry and
                        academia have to address the ever increasing challenges and
                        requirements in order to meet the evolving landscape of security
                        threats. Over the years, the goal of HASP has been to bring together
                        researchers, developers, and practitioners from academia and industry,
                        to share new research results, practical insights, experiences and
                        implementations related to all aspects of hardware and architectural
                        support for security and privacy, and to discuss future trends in
                        research and applications. We encourage contributions describing
                        innovative work on hardware and architectural support for Internet of
                        Things (IoT), smartphones and other smart devices, sensors and sensor
                        networks, cloud computing and data centers which form the backbone
                        of much of computing today.
