Nota di contenuto	Suitability of raw-crushed wind-turbine blade for use in concrete production -- Measuring corrosion-induced deformations in reinforced concrete: An image-based approach by means of X-ray computed tomography -- Life-Cycle Assessment of Chloride Exposed Concrete Structures - A Comparative Study Covering Different Durability Concepts and Repair Measures -- Life Cycle Assessment of cleaner concrete supply chains through decarbonisation and circularity scenarios -- Improved Reuse of Concrete Components.
Sommario/riassunto	This volume presents the proceedings of the fib International Conference on Concrete Sustainability, held in Guimarães, Portugal on 11–13 September 2024. It covers topics such as concrete and advanced

materials, structural performance and design, construction methods and management, durability, life cycle design, through-life management and care, resilience, dismantlement, reuse and recycling, & innovation in buildings and civil structure. fib (The International Federation for Structural Concrete) is a not-for-profit association whose mission is to develop at an international level the study of scientific and practical matters capable of advancing the technical, economic, aesthetic, and environmental performance of concrete construction.
