Sommario/riassunto	Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES) has been widely adopted as a routine analytical technique for elemental analysis in both industry and academia. However, spectral interference can be a major problem, particularly with such line-rich elements as the rare earth elements. An Atlas of High Resolution Spectra of Rare Earth Elements , which comes complete with a CD of spectra in full colour, is a reference source suitable for all analytical spectroscopists. Using some previously unpublished high resolution spectra, this atlas enables users of ICP-AES to select the be

Sommario/riassunto	This book examines the post-Cold War Polish-German relationship and the puzzling rise of foreign and security policy differences between the two states during the 2000s. Through an investigation of four policy issues - NATO's out-of-area mandate, European Constitution and the division of voting power in the Council, relations with Russia and the eastern neighbours, as well as EU energy policy - the author identifies the roots of their conflict in a structure of material, spatial and

temporal asymmetries. Rather than treat them as currency, however, he explores the less conspicuous ways in which power is exercised and structure matters inside a community governed by shared rules and norms. In pursuing its research question, theoretical work, historical reconstructions and empirical analyses, the book combines security studies, transatlantic relations, European integration, and Polish and German politics with general theorizing and conceptual grounding in international relations and political science.
