

1. Record Nr.	UNINA9910380742803321
Autore	Fraillon Julian
Titolo	Preparing for Life in a Digital World : IEA International Computer and Information Literacy Study 2018 International Report / / by Julian Fraillon, John Ainley, Wolfram Schulz, Tim Friedman, Daniel Duckworth
Pubbl/distr/stampa	2020 Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020
ISBN	9783030387815 303038781X
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (XXII, 297 p. 5 illus., 3 illus. in color.)
Classificazione	EDU011000EDU039000EDU043000
Disciplina	371.26
Soggetti	Educational tests and measurements Educational technology Education - Data processing International education Comparative education Assessment and Testing Digital Education and Educational Technology Computers and Education International and Comparative Education
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Executive Summary -- Chapter 1: Introduction to the IEA International Computer and Information Literacy 1 Study 2018 -- Chapter 2: The contexts for education on computer and information literacy and computational thinking -- Chapter 3: Students' computer and information literacy -- Chapter 4: Students' computational thinking -- Chapter 5: Students' engagement with information and communications technologies -- Chapter 6: Teaching with and about information and communications technologies -- Chapter 7: Investigating variations in computer and information literacy and computational thinking -- Chapter 8: Reflections on the IEA International Computer and Information Literacy 239 Study 2018 --

Appendices.

Sommario/riassunto

This Open Access book summarizes the key findings from the second cycle of IEA's International Computer and Information Literacy Study (ICILS), conducted in 2018. ICILS seeks to establish how well schools around the globe are responding to the need to provide young people with the necessary digital participatory competencies. Effective use of information and communication technologies (ICT) is an imperative for successful participation in an increasingly digital world. ICILS 2018 explores international differences in students' computer and information literacy (CIL), namely their ability to use computers to investigate, create, and communicate at home, at school, in the workplace, and in the community. Participating countries also had an option to administer an assessment of students' computational thinking (CT), focused on their ability to recognize aspects of real-world problems appropriate for computational formulation, and to evaluate and develop algorithmic solutions to those problems, so that the solutions could be operationalized with a computer. The data collected by ICILS 2018 show how digital competencies can be assessed using instruments representing authentic contexts for ICT use, and how students' CIL and CT skills relate to school learning experiences, out-of-school contexts, and student characteristics. Those data also show how learning technologies are used in classrooms around the world. Background questionnaires asked students about their use of ICT, and collected information from teachers, schools, and national education systems about the resourcing and teaching of CIL (and CT) within their countries. The results of ICILS 2018 will enable policymakers and education systems to develop a better understanding of the contexts and outcomes of CIL (and CT) education programs.
