Sommario/riassunto	This volume provides an overview and tour (with many interesting stops along the way) of Devonian and Ordovician intraplate magmatism and associated sedimentary rocks and tectonics in the regions of Kuznetsk Alatau, Minusinsk Basin and Khakassia in western Siberia. All chapters were written by experts, many of which have been studying these regions for decades. The first book to present and review this information in English for an international audience, it includes both overviews of the magmatic and associated sedimentary history, and selected key field sites, which are described in detail.
