

1. Record Nr.	UNINA9910383823303321
Titolo	The 10th International Conference on Engineering, Project, and Production Management / / edited by Kriengsak Panuwatwanich, Chien-Ho Ko
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2020
ISBN	9789811519109 9811519102
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (XX, 671 p. 196 illus., 149 illus. in color.)
Collana	Lecture Notes in Mechanical Engineering, , 2195-4364
Disciplina	658.15
Soggetti	Industrial management Project management Environmental management Construction industry - Management Industrial Management Project Management Environmental Management Construction Management
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Evaluating the Sustainability of Land Development Projects -- Practices of Sustainable Development in Higher Education Institutions: Case Study of Al-Zaytoonah University of Jordan -- The adoption of building environmental performance assessment methods in the UAE built environment -- Application of Robotic Technology for the Advancement of Construction Industry in Sri Lanka: A Review -- Prefabrication and waste minimisation in construction projects: Perspectives from New Zealand -- Sustainable performance in the earthworks sub sector: exploring the machinery selection framework in New Zealand -- Integrating Lifecycle Thinking in Asset Management Through BIM: Opportunities for the Water Sector -- Information systems supporting the optimization of the prefabrication process in the construction industry - case study of a steel plant.

## Sommario/riassunto

This book gathers the proceedings of the EPPM 2019 conference, and highlights innovative work by researchers and practitioners active in various industries around the globe. Recent advances in science and technology have made it possible to seamlessly connect and integrate various elements of engineering systems, and opened the door for innovations that have transformed how we live and work. While these developments have yielded enhanced efficiency and numerous improvements in our current practices, the problems caused by the increased complexity of these integrated systems can be extremely difficult. Accordingly, solving these problems involves applying cross-disciplinary expertise to address the heterogeneity of the various elements inherent in the system. These proceedings address four main themes: (I) Smart and Sustainable Construction, (II) Advances in Project Management Practices, (III) Toward Safety and Productivity Improvement, and (IV) Smart Manufacturing, Design, and Logistics. As such, they will be of interest to and valuable to researchers and practitioners in a range of industries seeking an update on the translational fields of engineering, project, and production management.
