| Sommario/riassunto | Spanish speakers, whether in monolingual or bilingual situations, or in majority or minority contexts, represent a considerable population worldwide. Spanish speakers in the U.S. constitute an illustrative context of the challenges faced by speech-language practitioners to provide realistic services to an increasing and diverse Spanish-speaking caseload. There is still considerable paucity in the amount of literature on Hispanic individuals with clinical relevance in speech-language pathology. Particularly lacking are works that link both empirical and theoretical bases to evidence-based procedures for child and adult Spanish users with communication disorders. Further, because communication skills depend on multiple phenomena beyond strictly linguistic factors, speech-language students and practitioners require multidisciplinary bases to realistically understand Spanish clients' communication performance. This volume attempts to address those gaps. This publication takes a multidisciplinary approach that integrates both theoretical and empirical grounds from Speech-Language Pathology, Neurolinguistics, Neuropsychology, Education, and Clinical Psychology to develop evidence-based clinical procedures for monolingual Spanish and bilingual Spanish-English children and adults with communication disorders. |

Sommario/riassunto

This book is the product of a collaborative effort involving partners from Africa, Asia, Europe and Latin America who were funded by the International Development Research Centre Programme on Women and Migration (2006-2011). The International Institute of Social Studies at Erasmus University Rotterdam spearheaded a project intended to distill and refine the research findings, connecting them to broader literatures and interdisciplinary themes. The book examines commonalities and differences in the operation of various structures of power (gender, class, race/ethnicity, generation) and their interactions within the institutional domains of intra-national and especially inter-national migration that produce context-specific forms of social injustice. Additional contributions have been included so as to cover issues of legal liminality and how the social construction of not only femininity but also masculinity affects all migrants and all women. The resulting set of 19 detailed, interconnected case studies makes a valuable contribution to reorienting our perceptions and values in the discussions and decision-making concerning migration, and to raising awareness of key issues in migrants' rights. All chapters were anonymously peer-reviewed. This book resulted from a series of projects funded by the International Development Research Centre (IDRC), Canada.

	Sommario/riassunto	This book reflects the latest research trends, methods and experimental results in the field of electrical and information technologies for rail transportation, which covers abundant state-of-the-art research theories and ideas. As a vital field of research that is highly relevant to current developments in a number of technological domains, the subjects it covered include intelligent computing, information processing, Communication Technology, Automatic

Control, etc. The objective of the proceedings is to provide a major interdisciplinary forum for researchers, engineers, academicians as well as industrial professionals to present the most innovative research and development in the field of rail transportation electrical and information technologies. Engineers and researchers in academia, industry, and the government will also explore an insight view of the solutions that combine ideas from multiple disciplines in this field. The volumes serve as an excellent reference work for researchers and graduate students working on rail transportation, electrical and information technologies.
