| Titolo | Unconventional Techniques for the Production of Light Alloys and Composites // by Jose Martin Herrera Ramirez, Raul Perez Bustamante, Cesar Augusto Isaza Merino, Ana Maria Arizmendi Morquecho |
| Pubbl/distr/stampa | Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020 |
| ISBN | 3-030-48122-0 |
| Edizione | [1st ed. 2020.] |
| Descrizione fisica | 1 online resource (215 pages) |
| Disciplina | 620.16 |
| Soggetti | Metals Materials - Analysis Ceramic materials Aerospace engineering Astronautics Metals and Alloys Characterization and Analytical Technique Ceramics Aerospace Technology and Astronautics |
| Lingua di pubblicazione | Inglese |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| Nota di bibliografia | Includes bibliographical references and index. |
| Nota di contenuto | Chapter 1. Introduction -- Chapter 2. Manufacturing Processes of Light Metals and Composites -- Chapter 3. Powder Metallurgy -- Chapter 4. Sandwich Technique -- Chapter 5. Severe Plastic Deformation -- Chapter 6. Additive Manufacturing -- Chapter 7. Thermal Spray Coatings -- Chapter 8. Characterization Techniques -- Chapter 9. Interface Characterization -- Chapter 10. Applications in the Aeronautical and Aerospace Industries. |
| Sommario/riassunto | This book addresses methods used in the synthesis of light alloys and composites for industrial applications. It begins with a broad introduction to virtually all aspects of the technology of light alloys and composite materials for aircraft and aerospace applications. The basic theory of fiber and particle reinforcements; light metallic material characteristics and composite systems; components forms, and |

manufacturing techniques and processes are discussed. The book then progresses to describe the production of alloys and composites by unconventional techniques, such as powder metallurgy, sandwich technique, severe plastic deformation, additive manufacturing, and thermal spray, making it appropriate for researchers in both academia and industry. It will be of special interest to aerospace engineers. Provides a broad introduction to the technology used in manufacturing light alloys and composite materials; Describes the current technologies employed in synthesizing light alloys made from advanced materials; Focuses on unconventional techniques used to produce light alloys and composites in aerospace applications.
