Sommario/riassunto	There is a lot written on climate change from various points of view, but this is the first work that demonstrates the connection between the hunger of the poor, the deprivation of safe and healthy food on the part of those who can afford it in the wealthy countries, but still face starvation in the sense of lack of nourishment, and climate change itself. It looks at the case law and the jurisdiction of the ICC, and

adopts a thorough critical approach. This book is an excellent contribution to the development of the debate on climate change.
