

1. Record Nr.	UNINA9910410653603321
Autore	Roose Eric J
Titolo	Soil erosion and carbon dynamics // edited by Eric J. Roose. [et al.]
Pubbl/distr/stampa	Taylor & Francis, 2006 Boca Raton, FL : , : CRC, Taylor & Francis, , 2006
ISBN	1-135-46054-X 0-429-20876-6 1-135-46055-8 1-280-37740-2 9786610377404 0-203-49193-9
Descrizione fisica	1 online resource (443 p.)
Collana	Advances in soil science
Classificazione	NAT023000SCI018000TEC003000
Altri autori (Persone)	RooseEric
Disciplina	631.4/5
Soggetti	Soil erosion Carbon cycle (Biogeochemistry) Soils - Carbon content
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface; About the Editors; Contributors; Contents; 1; 2; 3; 4; 5; 6; 7; 8; 9; 10; 11; 12; 13; 14; 15; 16; 17; 18; 19; 20; 21; Index
Sommario/riassunto	The most complete, nonpartisan source of information available today on this hot agronomic topic, this book brings together a diverse group of papers and data to resolve the debate between sedimentologists, soil scientists, and agronomists over whether the effects of soil erosion on carbon and atmospheric CO ₂ is beneficial or destructive. Divided into four sections, it offers data on how soil erosion affects soil, water, and air quality. Important topics include solubilization, mineralization rate, carbon transfer, and sediment deposition, as well as carbon dioxide emissions, global warming po
