

1. Record Nr.	UNISALENT0991001397769707536
Titolo	L'opera completa di Cézanne / presentazione di Alfonso Gatto ; apparati critici e filologici di Sandra Orienti
Pubbl/distr/stampa	Milano : Rizzoli, [1970]
Descrizione fisica	128 p. : ill. ; 32 cm
Collana	Classici dell'arte
Altri autori (Persone)	Gatto, Alfonsoauthor Orienti, Sandra
Disciplina	759.4
Soggetti	Cezanne, Paul - Opere - Cataloghi Cézanne, Paul Cézanne, Paul
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910412104903321
Autore	Zhu Xiaoqiang
Titolo	DLP-KDD '19 : Proceedings of the 1st International Workshop on Deep Learning Practice for High-Dimensional Sparse Data / / Xiaoqiang Zhu [and eight others]
Pubbl/distr/stampa	New York, NY : , : Association for Computing Machinery, , 2019
Descrizione fisica	1 online resource (109 pages)
Disciplina	006.312
Soggetti	Data mining Knowledge management
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>In the increasingly digitalized world, it is of utmost importance for various applications to harness the ability to process, understand, and exploit data collected from the Internet. For instance, in customer-centric applications such as personalized recommendation, online advertising, and search engines, interest/intention modeling from customers' behavioral data can not only significantly enhance user experiences but also greatly contribute to revenues. Recently, we have witnessed that Deep Learning-based approaches began to empower these internet- scale applications by better leveraging the massive data. However, the data in these internet-scale applications are high dimensional and extremely sparse, which makes it different from many applications with dense data such as image classification and speech recognition where Deep Learning-based approaches have been extensively studied. For example, the training samples of a typical click-through rate (CTR) prediction task often involve billions of sparse features, how to mine, model and inference from such data becomes an interesting problem, and how to leverage such data in Deep Learning could be a new research direction. The characteristics of such data pose unique challenges to the adoption of Deep Learning in these applications, including modeling, training, and online serving, etc.</p>

More and more communities from both academia and industry have initiated the endeavors to solve these challenges. We organized this workshop to provide a venue for both the research and engineering communities to discuss the challenges, opportunities, and new ideas in the practice of Deep Learning on high-dimensional sparse data.
