

1. Record Nr.	UNINA9910412152303321
Titolo	Heterogeneous Photocatalysis : Recent Advances / / edited by Mario J. Muñoz-Batista, Alexander Navarrete Muñoz, Rafael Luque
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020
ISBN	3-030-49492-6
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (VIII, 301 p. 125 illus., 90 illus. in color.)
Collana	Topics in Current Chemistry Collections, , 2367-4075
Disciplina	541.395
Soggetti	Catalysis Chemistry, Organic Green chemistry Pollution Physical chemistry Organic Chemistry Green Chemistry Physical Chemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Waste-derived materials: Opportunities in photocatalysis -- Mechanochemical forces as a synthetic tool for zero and one-dimension titanium oxide based nano-photocatalysts -- Improvements in catalyst synthesis and photocatalytic oxidation processing based on the use of ultrasound -- Ferrite Materials for Photoassisted Environmental and Solar Fuels Applications -- Characterization of Photo-catalysts: from Traditional to Advanced Approaches -- Photocatalytic Approaches for Hydrogen Production via Formic Acid Decomposition -- Limitations and prospectives in wastewater treatment by UV and visible light active heterogeneous photocatalysis: a critical review -- Photocatalytic Reactor Modelling. Applications to Advanced Oxidation Processes for Chemical Pollution Abatement.
Sommario/riassunto	The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science

including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. The chapter "Mechanochemical Forces as a Synthetic Tool for Zero and One-Dimensional Titanium Oxide-Based Nano-photocatalysts" is available open access under a CC BY 4.0 License via link.springer.com. .
