

1. Record Nr.	UNINA9910416097403321
Autore	Omran Basma A
Titolo	Nanobiotechnology: A Multidisciplinary Field of Science // by Basma A. Omran
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2020
ISBN	3-030-46071-1
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (244 pages)
Collana	Nanotechnology in the Life Sciences, , 2523-8027
Disciplina	620.5
Soggetti	Plant breeding Nanotechnology Microbiology Plant biochemistry Aquatic ecology Plant Breeding/Biotechnology Plant Biochemistry Freshwater & Marine Ecology Ultraestructura (Biologia) Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Preface -- Introduction: Nanotechnology and Nanobiotechnology, Different Types of Nanomaterials, and General Characterization Techniques -- Microbial Synthesis of Different Nanomaterials using Prokaryotic Microorganisms (Bacteria and Actinomycetes) -- Microbial Synthesis of Different Nanomaterials using Prokaryotic Microorganisms (Bacteria and Actinomycetes) -- Photosynthesis of Different Nanomaterials Using Different Plant Extracts and the Extracts of Agro-Industrial Waste (Phytonanotechnology) -- Different Application Fields of Biologically Synthesized Nanoparticles -- Safety of Prepared Nanomaterials and Future Prospectives -- Bibliography -- Index.
Sommario/riassunto	The generation of well-defined nanoparticles of excellent size and shape involves physical and chemical methodologies that are complicated, expensive, and produce hazardous toxic waste that is

harmful to the environment and to human health. In order to combat the disadvantages of these methods, scientists have created “the biological method,” a new synthetic methodology that serves as a proper alternative to physical and chemical methodologies because of its easy utility, low cost, rapid synthesis, controlled size characteristics, controlled toxicity, and eco-friendliness. Nanobiotechnology is the science in which living matter can be manipulated and exploited to produce materials within the nano-scale. It is a multidisciplinary field of science framed by biology, chemistry, engineering, materials, and life sciences. Different biological entities can be exploited to yield biologically synthesized nanomaterials including bacteria, actinomycetes, yeast, fungi, viruses, algae, plant extracts, and agro-industrial waste extracts. This book represents a comprehensive review concerning the state of the art in nanobiotechnology, emphasizing the use of diverse biological entities in the science, and its versatile applications. It describes currently existing methodology with the latest published references, and provides safety information. It serves as the ideal guide for scientists interested in exploring nanobiotechnology.
