Sommario/riassunto	Geographic Information has an important role to play in linking and combining datasets through shared location, but the potential is still far from fully realized because the data is not well organized and the technology to aid this process has not been available. Developments in the Semantic Web and Linked Data, however, are making it possible to integrate data based on Geographic Information in a way that is more accessible to users. Drawing on the industry experience of a

geographer and a computer scientist, *Linked Data: A Geographic Perspective* is a practical guide to implementing Geograph
