Sommario/riassunto	Design and develop hybrid scenarios with SharePoint Online and SharePoint Server 2019. This book will help you build hybrid

environments from scratch, and covers basic to advanced scenarios. The book takes you through the setup and configuration of SharePoint 2019 on virtual machines in Microsoft Azure. It gives you an overview of the features of the SharePoint Server 2019 User Experience. Integration of SP 2019 with PowerApps and Microsoft Flow is covered, along with Power BI reporting. You will learn to manage the data gateway and understand how to publish the Power BI Report. Configuration of the SP 2019 home page is explained and you learn how to enable a hybrid experience via the SP Office 365 link setting. You will know how to register a public domain in Office 365 and configure it for SP hybrid. Cloud hybrid search with the PowerShell script approach is discussed as well as SP 2019 hybrid Self-Service Site Creation. Configuration of the hybrid taxonomy, content types, and SharePoint framework development with SP 2019 are covered. And the book ends on using the office online server for SharePoint Server 2019 along with SP Server 2019 upgrade scenarios. After reading this book, you will be able to build and manage different hybrid environments with SharePoint Online and SharePoint Server 2019. You will:

- Enlarge your hybrid terminology
- Get familiar with the new and improved features of SharePoint Server 2019
- Develop a hybrid experience with SharePoint Server 2019
- Enable hybrid search
- Understand the on-premises data gateway
- Configure and integrate SharePoint Server 2019 with Power Platform, including Power BI, Power Apps, and Power Automate.
