Titolo	Comunicazioni dell'Istituto Papirologico G. Vitelli, 13 / / a cura di Guido Bastianini, Simona Russo
Pubbl/distr/stampa	Firenze : , : Firenze University Press, , 2019
Descrizione fisica	1 online resource (198 pages) : illustrations; digital, PDF file(s)
Collana	Edizioni dell’Istituto Papirologico «G. Vitelli» ; ; 9
Disciplina	930
Soggetti	Manuscripts, Greek (Papyri) Manuscripts, Classical (Papyri)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	The thirteenth volume of Comunicazioni dell'Istituto Papirologico «G. Vitelli» is divided, as was the previous one, into three sections: 1. Editions and rieditions of texts; 2. Critical notes; 3. Chronique de lexicographie papyrologique de la vie matérielle. In the first section there are texts which are being published for the first time or which are subject to a revision and a new edition, both belonging to various collections. This section also includes the exhibition of an exceptional artefact from the Arab period, belonging to the Papyrological Institute «G. Vitelli»'s collection. The second section includes three contributions with careful palaeographic and linguistic observations on literary and documentary texts, and a fourth contribution offering an exhaustive summary of the publication state of an archive from the Institute's collection. Lastly, the third section, as consolidated by the previous volume of the comunicazioni, collects several findings of the international research project on the lexicography of material culture (Lex.Pap.Mat.), documented in the language of papyri.

Sommario/riassunto

The novelty of this work is the fact that it introduces a rigorous and objective economic perspective of current renewable energy support mechanisms and an empirical analysis of the strengths and weaknesses of these mechanisms, which is much needed in a debate often dominated by widespread misconceptions. The economic rationale for renewable energy is straightforward: the optimum amount of renewable energy for grid-connected generation is given by the intersection of the renewable energy supply curve with the avoided cost of thermal electricity generation. The proposed analytical framework: (i
