1. Record Nr.	UNINA9910424948503321
Autore	Takagi Tsuyoshi
Titolo	International Symposium on Mathematics, Quantum Theory, and Cryptography : Proceedings of MQC 2019 / / edited by Tsuyoshi Takagi, Masato Wakayama, Keisuke Tanaka, Noboru Kunihiro, Kazufumi Kimoto, Yasuhiko Ikematsu
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2021
ISBN	981-15-5191-X
Edizione	[1st ed. 2021.]
Descrizione fisica	1 online resource (XII, 274 p. 83 illus., 24 illus. in color.)
Collana	Mathematics for Industry, , 2198-3518 ; ; 33
Classificazione	COM031000COM053000SCI057000TEC009000
Disciplina	519
Soggetti	Engineering mathematics
	Engineering - Data processing
	Data structures (Computer science)
	Information theory
	Quantum computers
	Data protection
	Mathematical and Computational Engineering Applications
	Data Structures and Information Theory
	Quantum Computing
	Data and Information Security
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Sustainable Cryptography -- What Kind of Insight Provide Analytical Solutions of Quantum Models? -- Emerging Ultrastrong Coupling between Light and Matter Observed in Circuit Quantum Electrodynamics -- Quantum Random Numbers Generated by a Cloud Superconducting Quantum Computer -- Quantum Factoring Algorithm: Resource Estimation and Survey of Experiments -- A Review of Secret Key Distribution Based on Bounded Observability -- Towards Constructing Fully Homomorphic Encryption without Ciphertext Noise from Group Theory -- Number Theoretic Study in Quantum Interactions -- From the Bloch Sphere to Phase Space Representations with the Gottesman-Kitaev-Preskill Encoding -- A Data Concealing Technique

with Random Noise Disturbance and A Restoring Technique for the
Concealed Data by Stochastic Process Estimation.

Sommario/riassunto	This open access book presents selected papers from International Symposium on Mathematics, Quantum Theory, and Cryptography (MQC), which was held on September 25-27, 2019 in Fukuoka, Japan. The international symposium MQC addresses the mathematics and quantum theory underlying secure modeling of the post quantum cryptography including e.g. mathematical study of the light-matter interaction models as well as quantum computing. The security of the most widely used RSA cryptosystem is based on the difficulty of factoring large integers. However, in 1994 Shor proposed a quantum polynomial time algorithm for factoring integers, and the RSA cryptosystem is no longer secure in the quantum computing model. This vulnerability has prompted research into post-quantum cryptography using alternative mathematical problems that are secure in the era of quantum computers. In this regard, the National Institute of Standards and Technology (NIST) began to standardizepost-quantum cryptography in 2016. This book is suitable for postgraduate students in mathematics and computer science, as well as for experts in industry working on post-quantum cryptography.
