   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Nota di bibliografia   Includes bibliographical references and index.

   Sommario/riassunto This book casts a light on the daily struggles and achievements of
                       'gender experts' working in environment and development
                       organisations, where they are charged with advancing gender equality
                       and social equity and aligning this with visions of sustainable
                       development. Developed through a series of conversations convened by
                       the book's editors with leading practitioners from research, advocacy
                       and donor organisations, this text explores the ways gender
                       professionals - specialists and experts, researchers, organizational
                       focal points - deal with personal, power-laden realities associated with
                       navigating gender in everyday practice. In turn, wider questions of
                       epistemology and hierarchies of situated knowledges are examined,
                       where gender analysis is brought into fields defined as largely techno-
                       scientific, positivist and managerialist. Drawing on insights from
                       feminist political ecology and feminist science, technology and society
                       studies, the authors and their collaborators reveal and reflect upon
                       strategies that serve to mute epistemological boundaries and enable
                       small changes to be carved out that on occasions open up promising
                       and alternative pathways for an equitable future. This book will be of
                       great relevance to scholars and practitioners with an interest in

environment and development, science and technology, and gender
and women's studies more broadly.
