## Sommario/riassunto

Carbonate rocks (limestones and dolomites) constitute a major part of the geological column and contain not only 60% of the world's known hydrocarbons but also host extensive mineral deposits. This book represents the first major review of carbonate sedimentology since the mid 1970's. It is aimed at the advanced undergraduate - postgraduate level and will also be of major interest to geologists working in the oil industry. Carbonate Sedimentology is designed to take the reader from the basic aspects of limestone recognition and classification through to an appreciation of the most re

Sommario/riassunto	Die Türkei durchläuft einen tiefgreifenden gesellschaftlichen Wandel. Während sich die öffentliche Aufmerksamkeit auf den politischen Autoritarismus und die Repression richtet, rückt Errol Babacan die kulturkämpferische Dynamik in den Blick. Auf der Basis einer Feldstudie bestimmt er die Regierungspartei AKP als Trägerin eines Hegemonieprojekts, das mit einer wachsenden Schicht religiöser Akteure vernetzt ist, die ihre Stellung sukzessive ausbauen. Die Religionsbehörde Diyanet, theologische Schulen und islamische Bruderschaften werden dabei im Zentrum einer religiösen Privilegienstruktur verortet, deren sozio-ökonomische Grundlage ein neoliberales Armutsregime ist. »Insgesamt bietet Babacans Buch einen theoretisch ambitionierten, intellektuell anregenden und historisch umsichtigen Blick auf die Herausbildung und Beständigkeit des Hegemonieprojekts der AKP.« »Wer sich in der Akademie mit der Frage herumschlägt, wie sich das Konzept von Hegemonie in ein empirisches Forschungsprogramm übersetzen lässt, wird bei [...] Babacan fündig.« Besprochen in: Buchkultur, 192/5 (2020), Hans-Dieter Grünefeld
