1. Record Nr. UNINA9910437567203321

Autore	Sher Gene I
Titolo	Handbook of neuroevolution through Erlang / / Gene I. Sher
Pubbl/distr/stampa	New York, : Springer, 2013
ISBN	1-283-84888-0 1-4614-4463-2
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (835 p.)
Disciplina	005.13 005.133
Soggetti	ERLANG (Computer program language) Computer programming
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	pt. I. Foundations -- pt. II. Neuroevolution : taking the first step -- pt. III. A case study -- pt. IV. Advanced neuroevolution : creating the cutting edge -- pt. V. Applications -- pt. VI. Promises kept.
Sommario/riassunto	Handbook of Neuroevolution Through Erlang presents both the theory behind, and the methodology of, developing a neuroevolutionary-based computational intelligence system using Erlang. With a foreword written by Joe Armstrong, this handbook offers an extensive tutorial for creating a state of the art Topology and Weight Evolving Artificial Neural Network (TWEANN) platform. In a step-by-step format, the reader is guided from a single simulated neuron to a complete system. By following these steps, the reader will be able to use novel technology to build a TWEANN system, which can be applied to Artificial Life simulation, and Forex trading. Because of Erlang's architecture, it perfectly matches that of evolutionary and neurocomptational systems. As a programming language, it is a concurrent, message passing paradigm which allows the developers to make full use of the multi-core & multi-cpu systems. Handbook of Neuroevolution Through Erlang explains how to leverage Erlang's features in the field of machine learning, and the system's real world applications, ranging from algorithmic financial trading to artificial life and robotics.
