Sommario/riassunto

This volume explores the various strategies by which appropriate pasts were construed in scholarship, literature, art, and architecture in order to create "national", regional, or local identities in late medieval and early modern Europe. Because authority was based on lineage, political and territorial claims were underpinned by historical arguments, either true or otherwise. Literature, scholarship, art, and architecture were pivotal media that were used to give evidence of the impressive old lineage of states, regions, or families. These claims were related not only to classical antiquity but also to other periods that were regarded as antiquities, such as the Middle Ages, especially the chivalric age. The authors of this volume analyse these intriguing early modern constructions of "antiquity" and investigate the ways in which they were applied in political, intellectual and artistic contexts in the period of 1400–1700. Contributors include: Barbara Arciszewska, Bianca De Divitiis, Karl Enenkel, Hubertus Günther, Thomas Haye, Harald Hendrix, Stephan Hoppe, Marc Laureys, Frédérique Lemerle, Coen Maas, Anne-Françoise Morel, Kristoffer Neville, Konrad Ottenhey, Yves Pauwels, Christian Peters, Christoph Pieper, David Rijser, Bernd Roling, Nuno Senos, Paul Smith, Pieter Vlaardingerbroek, and Matthew Walker.

Sommario/riassunto	"This book explores the unique hardware programmability of FPGA (field-programmable gate array)-based embedded systems, using a learning-by-doing approach to introduce the concepts and techniques for embedded SoPC (system on a programmable chip) systems with Verilog. The book contains a large number of practical examples to illustrate and reinforce the hardware and software design concepts and techniques, as well as a complete code listing and experiment problems. The book is designed for upper-level undergraduate and entry-level graduate students in computer engineering, as well as practicing engineers"--

Sommario/riassunto

This book constitutes the proceedings of the 5th International Conference on Intelligent Technologies for Interactive Entertainment, INTETAIN 2013. The 23 full papers presented were carefully selected from numerous submissions. The conference aims at enhancing the understanding of recent and anticipated advances in interactive technologies, and their applications to entertainment, education, culture, and the arts. The papers are grouped in topical sections on linked media, gaming technologies, and technologies for live entertainment.
