

1. Record Nr.	UNINA9910437761003321
Titolo	International Asia Conference on Industrial Engineering and Management Innovation (IEMI2012) Proceedings : Core Areas of Industrial Engineering // edited by Ershi Qi, Jiang Shen, Runliang Dou
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2013
ISBN	9783642384455 3642384455
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (1741 pages) : illustrations (some color)
Collana	Gale eBooks
Altri autori (Persone)	DouRunliang
Disciplina	620.0095 670.42
Soggetti	Engineering Technological innovations Technology and Engineering Innovation and Technology Management
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	International conference proceedings.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Creativity and Innovation in Design -- Human Factors Engineering and Ergonomics -- Manufacturing Systems -- Production Planning and Control -- Quality Control and Management -- Supply Chain and logistics Management -- Intelligent Systems.
Sommario/riassunto	The International Conference on Industrial Engineering and Engineering Management is sponsored by the Chinese Industrial Engineering Institution, CMES, which is the only national-level academic society for Industrial Engineering. The conference is held annually as the major event in this arena. Being the largest and the most authoritative international academic conference held in China, it provides an academic platform for experts and entrepreneurs in the areas of international industrial engineering and management to exchange their research findings. Many experts in various fields from China and around the world gather together at the conference to review, exchange, summarize and promote their achievements in the fields of industrial engineering and engineering management. For example,

some experts pay special attention to the current state of the application of related techniques in China as well as their future prospects, such as green product design, quality control and management, supply chain and logistics management to address the need for, amongst other things low-carbon, energy-saving and emission-reduction. They also offer opinions on the outlook for the development of related techniques. The proceedings offers impressive methods and concrete applications for experts from colleges and universities, research institutions and enterprises who are engaged in theoretical research into industrial engineering and engineering management and its applications. As all the papers are of great value from both an academic and a practical point of view, they also provide research data for international scholars who are investigating Chinese style enterprises and engineering management.
