

1. Record Nr.	UNISALENTO991004083879707536
Autore	Cappello, Federica
Titolo	Deformazione di corpi elastici rinforzati da fibre : uno studio numerico. Tesi di laurea / laureanda Federica Cappello; relat. Ivonne Sgura
Pubbl/distr/stampa	Lecce : Università del Salento. Facoltà di Scienze MM. FF. NN. Corso di laurea in Matematica e Informatica, a.a. 2007-08
Descrizione fisica	54 p. ; 30 cm
Classificazione	AMS 65L10 AMS 65L60 AMS 74B20
Altri autori (Persone)	Sgura, Ivonne
Soggetti	Boundary value problems
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910437774403321
Autore	Li Guoqiang
Titolo	Advanced analysis and design for fire safety of steel structures // Guoqiang Li, Peijun Wang
Pubbl/distr/stampa	Berlin ; ; London, : Springer, 2013
ISBN	3-642-34393-7
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (357 p.)
Collana	Advanced topics in science and technology in China
Altri autori (Persone)	WangPeijun
Disciplina	693.82
Soggetti	Building, Fireproof Building, Iron and steel
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Fire in Building -- Properties of steel at elevated temperatures -- Fire-resistance of isolated steel components -- Fire-resistance of restrained flexural components -- Fire-resistance of restrained steel columns -- Fire-resistance of concrete slabs with steel deck -- Analysis of steel moment-resistant frames subjected to fire -- Analysis and design for large space steel structures subjected to fire.
Sommario/riassunto	Advanced Analysis and Design for Fire Safety of Steel Structures systematically presents the latest findings on behaviours of steel structural components in a fire, such as the catenary actions of restrained steel beams, the design methods for restrained steel columns, and the membrane actions of concrete floor slabs with steel decks. Using a systematic description of structural fire safety engineering principles, the authors illustrate the important difference between behaviours of an isolated structural element and the restrained component in a complete structure under fire conditions. The book will be an essential resource for structural engineers who wish to improve their understanding of steel buildings exposed to fires. It is also an ideal textbook for introductory courses in fire safety for master's degree programs in structural engineering, and is excellent reading material for final-year undergraduate students in civil engineering and fire safety engineering. Furthermore, it successfully bridges the information gap between fire safety engineers, structural engineers and building inspectors, and will be of significant interest to

architects, code officials, building designers and fire fighters. Dr. Guoqiang Li is a Professor at the College of Civil Engineering of Tongji University, China; Dr. Peijun Wang is an Associate Professor at the School of Civil Engineering of Shandong University, China.
