

1. Record Nr.	UNINA9910437779103321
Titolo	Pretreatment techniques for biofuels and biorefineries // Zhen Fang, editor
Pubbl/distr/stampa	Berlin, : Springer, 2013
ISBN	1-283-94629-7 3-642-32735-4
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (459 p.)
Collana	Green energy and technology, , 1865-3529
Altri autori (Persone)	FangZhen
Disciplina	662.88
Soggetti	Biomass energy Biomass energy industries
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	pt. 1. Biopretreatment -- pt. 2. Thermal pretreatment -- pt. 3. Chemical pretreatment -- pt. 4. Physicochemical pretreatment -- pt. 5. Gasification, liquefaction and biogas -- pt. 6. Novel pretreatment techniques -- pt. 7. Pretreatment of different types of biomass.
Sommario/riassunto	This book includes 19 chapters contributed by the world's leading experts on pretreatment methods for biomass. It extensively covers the different types of biomass (e.g. molasses, sugar beet pulp, cheese whey, sugarcane residues, palm waste, vegetable oil, straws, stalks and wood), various pretreatment approaches (e.g. physical, thermal, chemical, physicochemical and biological) and methods that show the subsequent production of biofuels and chemicals such as sugars, ethanol, extracellular polysaccharides, biodiesel, gas and oil. In addition to traditional methods such as steam, hot-water, hydrothermal, diluted-acid, organosolv, ozonolysis, sulfite, milling, fungal and bacterial, microwave, ultrasonic, plasma, torrefaction, pelletization, gasification (including biogas) and liquefaction pretreatments, it also introduces and discusses novel techniques such as nano and solid catalysts, organic electrolyte solutions and ionic liquids. This book offers a review of state-of-the-art research and provides guidance for the future paths of developing pretreatment techniques of biomass for biofuels, especially in the fields of

biotechnology, microbiology, chemistry, materials science and engineering. It intends to provide a systematic introduction of pretreatment techniques. It is an accessible reference work for students, researchers, academicians and industrialists in biorefineries. Zhen Fang is a Professor of Bioenergy and the leader and founder of the biomass group at the Xishuangbanna Tropical Botanical Garden of the Chinese Academy of Sciences. He is also an adjunct full Professor of Life Sciences at the University of Science and Technology of China.
