

1. Record Nr.	UNINA9910437784703321
Autore	Brito Jorge de
Titolo	Recycled aggregate in concrete : use of industrial, construction and demolition waste / / Jorge de Brito, Nabajyoti Saikia
Pubbl/distr/stampa	London ; ; New York, : Springer, c2013
ISBN	9781283911313 1283911310 9781447145400 1447145402
Edizione	[1st ed. 2013.]
Descrizione fisica	1 online resource (452 p.)
Collana	Green energy and technology, , 1865-3529
Altri autori (Persone)	SaikiaNabajyoti
Disciplina	620.1
Soggetti	Aggregates (Building materials) - Recycling Concrete - Recycling
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface -- 1.Sustainable Development in Concrete Production -- 2. Industrial Waste Aggregates -- 3.Construction and Demolition Waste Aggregates -- 4.Use of Industrial Waste as Aggregate -- 5.Use of Construction and Demolition Waste as Aggregate -- 6.Methodologies for Estimating Properties of Concrete Containing -- 7.Concrete with Recycled Aggregates in International Codes.
Sommario/riassunto	Concrete has become the most used man-made material in the world since its invention. The widespread use of this material has led to continuous developments such as ultra-high strength concrete and self-compacting concrete. Recycled Aggregate in Concrete: Use of Industrial, Construction and Demolition Waste focuses on the recent developments in which the use of various types of recycled waste materials as aggregate in the production of various types of concrete. By drawing together information and data from various fields and sources, Recycled Aggregate in Concrete: Use of Industrial, Construction and Demolition Waste provides full coverage of this subject. Divided into two parts, a compilation of varied literature data related to the use of various types of industrial waste as aggregates in concrete is followed by a discussion of the use of construction and

demolition waste as aggregate in concrete. The properties of the aggregates and their effect on various concrete properties are presented, and the quantitative procedure to estimate the properties of concrete containing construction and demolition waste as aggregates is explained. Current codes and practices developed in various countries to use construction and demolition waste as aggregates in concrete and issues related to the sustainability of cement and concrete production are also discussed. The comprehensive information presented in *Recycled Aggregate in Concrete: Use of Industrial, Construction and Demolition Waste* will be helpful to graduate students, researchers and concrete technologists. The collected data will also be an essential reference for practicing engineers who face problems concerning the use of these materials in concrete production.
