Sommario/riassunto

The concept of "Place" has become prominent in natural resource management, as professionals increasingly recognize the importance of scale, place-specific meanings, local knowledge, and social-ecological dynamics. *Place-Based Conservation: Perspectives from the Social Sciences* offers a thorough examination of the topic, dividing its exploration into four broad areas. Part One, *Conceptual Issues of Place-Based Conservation*, distinguishes and clarifies social science approaches. Part Two, *Experiencing Place*, probes the sources and effects of deeply individual relationships that people develop with places and landscapes. The third part, *Representing Place*, explores the ways in which human relationships with places are represented, become more visible and public and are transformed by conservation practices. The final section, *Mapping Place*, illustrates emerging techniques that connect meanings and sentiments to the material and locational characteristics of places. *Place-Based Conservation* provides a comprehensive resource for researchers and practitioners to help build the conceptual grounding necessary to understand and to effectively practice place-based conservation.
